PROJECTS

To see all projects, please visit my github

01.   OOP Transformers Collection App

MVC | PHP | BOOTSTRAP | HTML | REACT | SQL

- OOP app showing collection of Transformers & stats
- Fetched data from an external API to populate SQL Database
- used CSS and Bootstrap for the front-end and fetched data from SQL Database
- used functional, unit-tested PHP to add/remove items
- implemented 3 filter functions so users can search by specified category
- Adhered to SOLID principles

02.   Whack-a-Mole Javascript Game

JAVASCRIPT | HTML | CSS

- 'Moles' pop up at random using a randomiser function
- Used on-click event handlers to manipulate the DOM when user 'whacks' a target.
- regular code reviews enabled feedback from peers and clean, consistent code
- ahead of schedule - we were able to take on 2 more stories to add further fun functionality to the game

03.   Doctors Booking App

MONGO DB | EXPRESS | NODE | REACT | CSS | FIGMA

- MERN stack
- used salting & hashing for user login security
- verified functionality by unit testing with JEST
- planned and designed the app architecture and wireframes using Figma
- big focus on UX design, ensuring the app was responsive and accessible for streamline user experience.

SKILLS & OTHER TRAINING

- Scrum Master Certified with Scrum Alliance (CSM)
